PROFESSIONAL SUMMARY

Computer Science Engineering student (IIIT Raichur) with expertise in full-stack development(MERN), Machine Learning, and Deep Learning. Proven track record building scalable applications with measurable impact: 500+ concurrent users, 95%+ ML accuracy, 38–40% performance improvements.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Indian Institute of Information Technology, Raichur

2023–2027

CGPA: 7.6/10

SKILLS

Languages: C, C++, Python, JavaScript

Web Stack: React, Redux, Tailwind CSS, Node.js, Express.js, MongoDB

ML & DL: scikit-learn, Random Forest, SVM, OpenCV, Face Recognition, CNN, RNN, GRU, LSTM

Core CS: DSA, OOPs, DBMS, Operating Systems, Computer Networks

Tools & Platforms: Git, GitHub, Vercel, Render

EXPERIENCE

Teaching Assistant, IIIT Raichur

Sep 2025 – Dec 2025

- Mentored 120+ undergraduates in Data Structures and Algorithms; improved lab pass rates by 30% through structured debugging sessions and algorithm walkthroughs.

PROJECTS

KeyProctor – Behavioral Authentication Platform for Online Exams

[GitHub](#) (2026)

- Engineered keystroke dynamics ML authentication system with 95%+ identity verification accuracy using Random Forest (60%) + SVM (40%) ensemble; continuous re-authentication every 30s during exams.
- Architected full-stack exam platform (Python/Streamlit backend, JavaScript keystroke capture) with real-time behavioral monitoring, C++ code lab with auto-grading via local g++ compilation, and faculty dashboard.
- Implemented privacy-first security: behavioral anomaly detection, copy-paste blocking, session isolation; reduced cheating incidents by 40% with zero hardware requirements (no webcams/sensors).

EYEON – Automated Surveillance System

[Live](#) · [GitHub](#) (2025)

- Built OpenCV-based face recognition pipeline processing 15+ FPS video streams with >90% detection accuracy; integrated deep face embedding for real-time visitor identification.
- Deployed Telegram alert system delivering unknown visitor notifications in sub-3 seconds; reduced false positive alerts by 40% using threshold-based embedding calibration.
- Designed scalable architecture handling concurrent stream processing across multiple cameras with optimized memory footprint and latency under 100ms.

TheDoctor – AI Smart Healthcare Platform

[Live](#) · [GitHub](#) (2025)

- Developed MERN telemedicine platform handling 500+ concurrent users with JWT authentication, encrypted patient data, and real-time appointment scheduling; deployed on Vercel and Render.
- Integrated ML disease risk prediction model achieving 87% validation accuracy; implemented feature engineering pipeline for clinical data preprocessing.
- Optimized API latency by 38% through MongoDB query indexing, response caching (Redis), and efficient Mongoose schema design; reduced average response time from 800ms to 500ms.

ACHIEVEMENTS & AWARDS

- **Academic:** NTSE Scholar; Qualified IMO and Science Olympiad (Classes 6–10); Qualified NDA Exam
- **Sports:** Represented IIIT Raichur in Inter-IIIT Basketball Tournament (among 16+ IIITs)
- **Technical:** Teaching Assistant recognition for mentoring excellence; 30% improvement in student outcomes
